

SUKALPA TECH SOLUTIONS

Homologation Service Product Auto-canon

ABOUT US

“**Sukalpa Tech**” started in 2018-19 with the philosophy of Support, Succeed & Grow Stronger Together.

Vision

To be a top most engineering services company in India by 2025-26 to offer services with most trusted, reliable & innovative solutions.

Mission

Delighting the customers by uncompromisingly dynamic, technological developments & modernization that becomes vital to stay ahead of their competition at reasonable cost.

CORE VALUES

Integrity

Trust

Commitment

Ownership

ABOUT AUTO - CANON

- Auto -> Auto Mobile industry
Canon -> Rules and Regulation
Combination of rules and regulations for the automobile industry to get certified
- Is built by a team of passionate automotive professionals with extensive CMVR(Central Motor Vehicle Rules) Certification Process experience. We have worked on ICE(Internal Combustion Engine) vehicles as well as Electric Vehicle homologation starting from two-wheelers to commercial vehicles. We have exposure and experience in the end-to-end process of CMVR certification with all the testing agencies in India.
- Earlier with ICE vehicles and very few manufacturing players in the automotive sector, homologation engineers & managers were very less. Awareness about the homologation process is very less even today in the society and market. But now, every company needs a homologation engineer. Unfortunately, there are very handful of homologation engineers in the industry. Thus we come into the picture to take up the role of homologation engineer and help companies in the CMVR certification process.

Aim of AUTO - CANON

We aim to make the application process of product certification as per the “**government rules and regulations**” much simpler and easier to handle by anyone with our software platform.

Why AUTO – CANON ?

- It will bring the awareness of the product with a visual representation of the data to be filled without having any ambiguity to end users.
- It will reduce preparation and documentation time without any dependency.
- Most importantly with this intelligent software application, we eliminate the possibility of error being made and submit an incomplete application form. All the applications will be saved in the end user's account and can retrieve the previous data if required.
- Auto – Canon gives total control over the documentation and application process to the organization.

Benefits of AUTO – CANON

- **Icons** : We have included an **i info** image for ease of understanding so that anyone can use the application.
- **Visual Representation** : Once the supplier is added, the document will be displayed in **color** with contents, making it easier for the user to comprehend the documents current condition.
- **Data Storage** : To make data easier to handle and preserve , it will all be stored on cloud serves. User access to the data is available at all times.
- **Consumer Confidence** : Auto – Canon provides assurance to consumers that the vehicles they purchase are safe, reliable, and meet the necessary regulatory requirements.
- **Environmental Protection** : By enforcing compliance with emission norms and other environmental regulations, Auto – Canon contributes to a cleaner and greener environment.

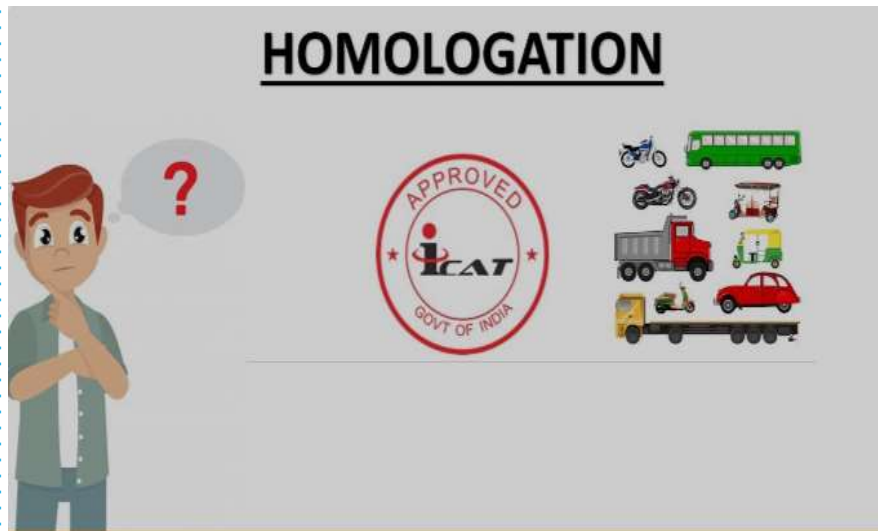

Auto-canon resolution to current scenarios

- **Cost and Time** : The Auto-Canon process involves significant costs for manufacturers, including testing fees and modifications to meet the standards. It also requires time to complete the necessary testing and certification procedures .
- **Evolving Regulations** : As regulations evolve and become more stringent, manufacturers need to continually update their vehicles to meet the new standards, which can be challenging and costly.
- **Compliance Complexity** : The Auto - canon process involves adherence to multiple regulations, making it complex for manufacturers to ensure compliance with each requirement.

What is Homologation ?

Homologation is the process of getting Government Approval by means of a Certificate which allows the Product to enter targeted Market. Process starts with the initial assessment followed by the list of tests according to standards and directives until the compilation of validated technical reports that finally results in the approval.

Pre - Homologation Process

Pre - Homologation is nothing but the performance of all or critical tests as per the applicable regulations similar to actual tests that are being performed by the testing agency during the approval process.

Types of Approval Process:

- Documentation Process
- Product Data Table Preparation
- Certification Initiation
- Execution of Approval Process
- Certification Grant

Upcoming Product

WMI Registration

- WMI Registration stands for **World Manufacturer Identifier** registration.
- The WMR registration form filling process will be automated by a new interactive product.
- Globally, the Vehicle Identification Number (VIN) system is used to uniquely identify a vehicle. The VIN comprises 17 characters that uniquely identify the vehicle as provided in ISO 3779 & ISO 4030.
- The first 3 characters of VIN that uniquely identify the manufacturer of the vehicle is called the **World Manufacturer Identifier (WMI)**.
- BIS being the National Standards Body of India & a member of the ISO, acts as the WMI coordinator in India & issues the WMI code to vehicle manufacturers in India after these are assigned by the Society of Automotive Engineers Inc., USA, the international agency responsible for the maintenance of the WMI codes.
